

Garage lift for an MGV8

Alan Aldous says "I have a car lift in the garage in case of a flood (it's also has been known to be used for work on car!) and you can see the very basic 'farm jack' at each corner that requires three 'pumps' to lift the 3 inches, this allows the second safety bolt to be fitted before the first is removed to lift a further 3 inches etc. I take it a corner at a time when I have used it. It's a HAMER car lift."
