Tex wiper arms and blades have been in continuous production in Britain since 1947. Until 1986 they were original equipment on a large range of vehicles made in Britain and elsewhere, and always represented the 'state of the art' in design, materials and manufacturing quality. Since 1986 they have been supplied as fully authentic spares for all of those vehicles as they matured into 'classics', and this great tradition is still carried on by Tex Automotive Limited as a member of the Heritage Group.

Even if you avoid the use of a classic vehicle in the rain, sometimes it's inevitable, and you need the assurance that the wipers will work as efficiently as they were originally designed to do. Choosing the correct parts from the Tex Classic range will ensure that a vehicle's wipers look right and work right.

Tex fits all the popular classics and many others

All of the popular wiper arm and blade specifications are available from the Tex Classic listings, with the original types of drive fixing and blade mountings. Three finishes are available - black, bright stainless steel and hand polished to satisfy the most concours conscious owner. If something is needed for a rare or one-off car, Tex offers various adjustable solutions or can tailor a bespoke item to an exact specification within 48 hours.

Tex Wiper tips

1. Regularly check the condition of blade rubbers - a split can mean an MOT failure.
2. Keep blade rubbers clean - embedded grit can scratch a screen.
3. Beware of incorrect substitute wiper fittings used on your car in the past - the correct Tex items might look different!
4. Check that wiper arms fit snugly onto the drive spindles, without wobble or slack.
