

Battery carrier

When carrying out a battery change, Peter Berry found a battery carrier very useful. (June 2025)

If you are fitting or removing a battery in one of the battery boxes behind the seats in an MGBGT V8 (or an MGB or MGC), using a battery carrier can make the task easier. I bought this Sealey Bt91/9 last year at a reasonable cost and it has transformed that trickiest of jobs, battery removal and installation. It now becomes a single-handed job! The other hand is needed to hold the cables out of the way. The battery carrier, when correctly placed on the battery, (across the car, as the opening is a little wider in that direction) transforms this operation into simplicity itself. I usually manage to 'fiddle' the two J-shaped brackets down the sides of the in-place battery and carefully install the retaining clamp across the top to complete the job. However, this requires a level of patience and three hands!

See the battery carrier on the Sealey website. [More](#)
